

WELLTH – A Web-Based Health & Financial Wellness Platform

By Adeela Faqui & Amita Choudhary

INTRODUCTION

WELLTH is a health-technology web application designed to address the challenges of fast-paced urban living, where convenience often overshadows intentional health and financial decisions.

- Urban routines shaped by deadlines, commuting, and constant movement often push aside health monitoring and financial discipline.
- Small, untracked decisions accumulate:
 - Weight fluctuations go unnoticed.
 - Food expenses increase without awareness.
 - Structured planning becomes secondary to urgency.
- WELLTH reintroduces control and clarity by integrating:
 - Weight tracking
 - Dietary expense management
 - Professional connectivity

Domain: Health-Tech **Implementation:** Web application for accessibility and scalability

i. PROBLEM STATEMENT

Modern urban lifestyles are shaped by time constraints and convenience-driven decisions.

- Existing health apps track physical metrics but ignore financial impact.
- Budgeting apps track expenses but overlook nutritional consequences.
- This fragmentation prevents holistic awareness and sustainable routines.

Need: An integrated system combining health monitoring, dietary expense tracking, and professional connectivity.

ii. TECHNOLOGY STACK (PROPOSED)

- **Backend:** Python
- **Frontend:** HTML, CSS, JavaScript
- **AI & Data Analysis:** Python-based ML libraries
- **Version Control:** Git & GitHub

iii. TIMELINE

Development Phases:

- Week 1–2: Requirement Analysis
- Week 3–4: UI Design
- Week 5–8: Backend Development
- Week 9–12: Frontend Integration
- Week 13–14: Testing
- Week 15–16: Deployment & Documentation

iv. VISION AND REQUIREMENTS SPECIFICATION (VRS)

Vision

To become a centralized health-technology platform integrating physical health monitoring and dietary financial management, promoting intentional living and sustainable routines.

Objectives

- Develop secure user authentication and profile management.
- Implement a weight tracking dashboard.
- Design a dietary expense tracking module.
- Integrate basic data visualization tools.
- Provide professional connection features with certified health experts.
- Ensure accessibility, scalability, and user-friendliness.

v. SYSTEM OVERVIEW

WELLTH will be a web-based platform accessible via modern browsers.

Core Features

- Secure accounts for users.
- Logging health metrics (e.g., weight).
- Recording food-related expenses.
- Administrative panel for monitoring system activity.

AI-Based Analytical Module

1. **Budget-Aware Nutrition Planner**
 - Suggests meals aligned with health goals and financial constraints.
2. **Goal-Adaptive Weight Strategy Generator**
 - Analyses weight data trends and recommends adjustments.
3. **Sustainability Score (WELLTH Score)**
 - Evaluates consistency in health tracking, budget adherence, and lifestyle stability.

vi. HIGH-LEVEL FUNCTIONAL REQUIREMENTS

- Allow users to register and securely log in.
- Enable users to record and monitor weight data.
- Allow users to log and track food-related expenses.
- Generate analytical insights based on health and financial data.
- Enable professionals to create and manage their profiles.
- Provide administrative functionality to manage users and oversee system activity.
